Skills and Qualifications

- Java Script
- React.js
- Node.js
- Express.js
- JWT Authentication
- MongoDB
- Material UI
- SASS/SCSS
- SQL
- Top Secret/SCI Clearance

Projects:

Employee Manager – [Employee Management](#) MERN stack application to track employee initial onboarding.

- Utilized React.js to build client front-end with search functionalities by last name and department for efficient personnel management using react “useState” hooks to remap rendered components.
- Utilized React Router to create application flow for seamless navigation for each page and functions.
- Implemented MongoDB Atlas as main database cluster for collections and document storage.
- Utilized Express for endpoint builds and Mongoose for data model rigidity.

Crypto Tracker: Built a [Cryptocurrency Tracker](#) with search functions, pagination functions and sparkline data for 7-day price graph fluctuation visual UI.

- Utilized Coin Gecko API with GET requests through AXIOS to track major cryptocurrency prices.
- Implemented sparkline graph library to provide users with a visual interface representing 7-day price history.
- Implemented Pagination functions using state management within the client to manipulate API endpoints.
- Implemented search functions utilizing API endpoints to provide users access to specific currencies.

Work Experience:

InsideOut Development Full Stack Developer(Intern) – April 2022 – Present

- Provide development support to lead team within a mentorship program. Support company roles with providing training curriculum to companies with onboarding management teams.

Communication Security Account Manager – August 2018 - Present
